

REBUILD PLAN

From a hard situation to a clear plan

The user explains what is happening. The app builds a plan and updates it when things change.

Hackathon 3: Equal Access

Millions of people face major life changes

These examples show the size of the need. Some people appear in more than one group.

322M

people worldwide have depression

304M

international migrants worldwide in 2024

672,502

reported U.S. divorces in 2023

453,242

people released from U.S. prisons in 2023

Do not add these numbers together. The groups overlap and use different types of data.

Who the app helps

Adults who are trying to rebuild after a major life change

PRIMARY USER

An adult who feels stuck and needs help deciding what to do first

Examples include leaving prison, divorce, moving to another country, losing housing, or rebuilding daily routines while living with depression.

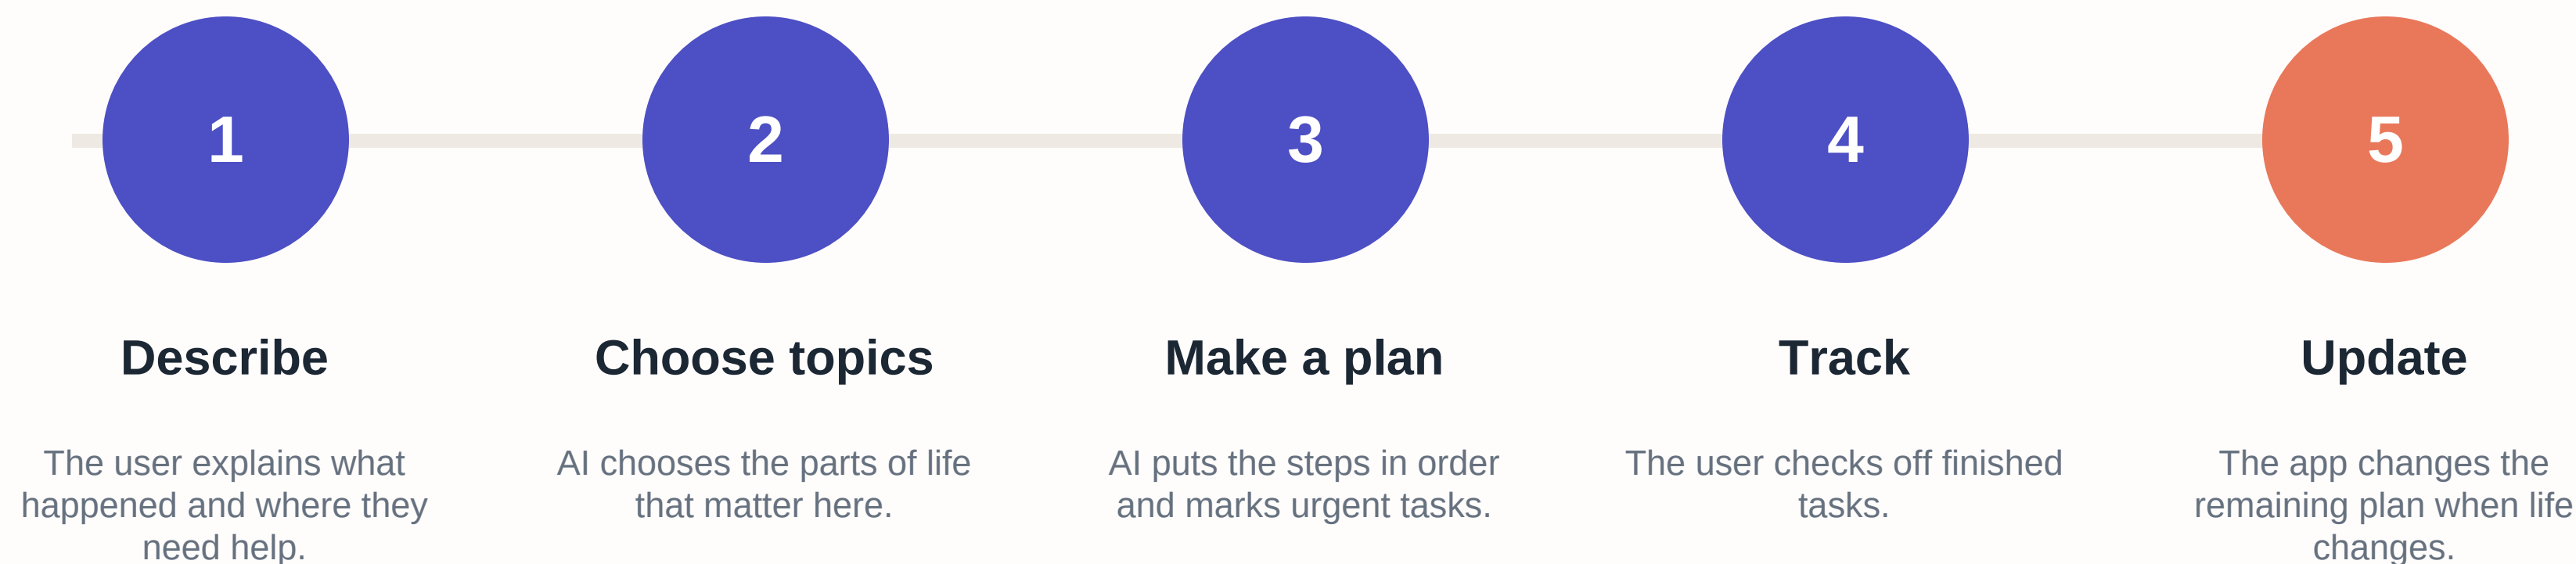

The app is not for

-  An immediate emergency
-  Legal, medical, or mental health decisions
-  People without private device access
-  Information that cannot be checked

The app organizes next steps. It does not replace a qualified professional.

How it works

The app turns the user's words into a plan and updates it later

Simple structure Seven fixed topics make the results consistent. Free text lets users explain things in their own words.

Example: starting again after prison

This is one example. The same process works for other life changes.

“

I got out of prison three weeks ago. I am in Ohio and staying with my sister. I do not have an ID or a job yet, and my parole officer wants a work plan by next month.

Free-text input

URGENT

Confirm the work plan deadline

URGENT

Collect documents for a state ID

SOON

Draft a realistic employment plan

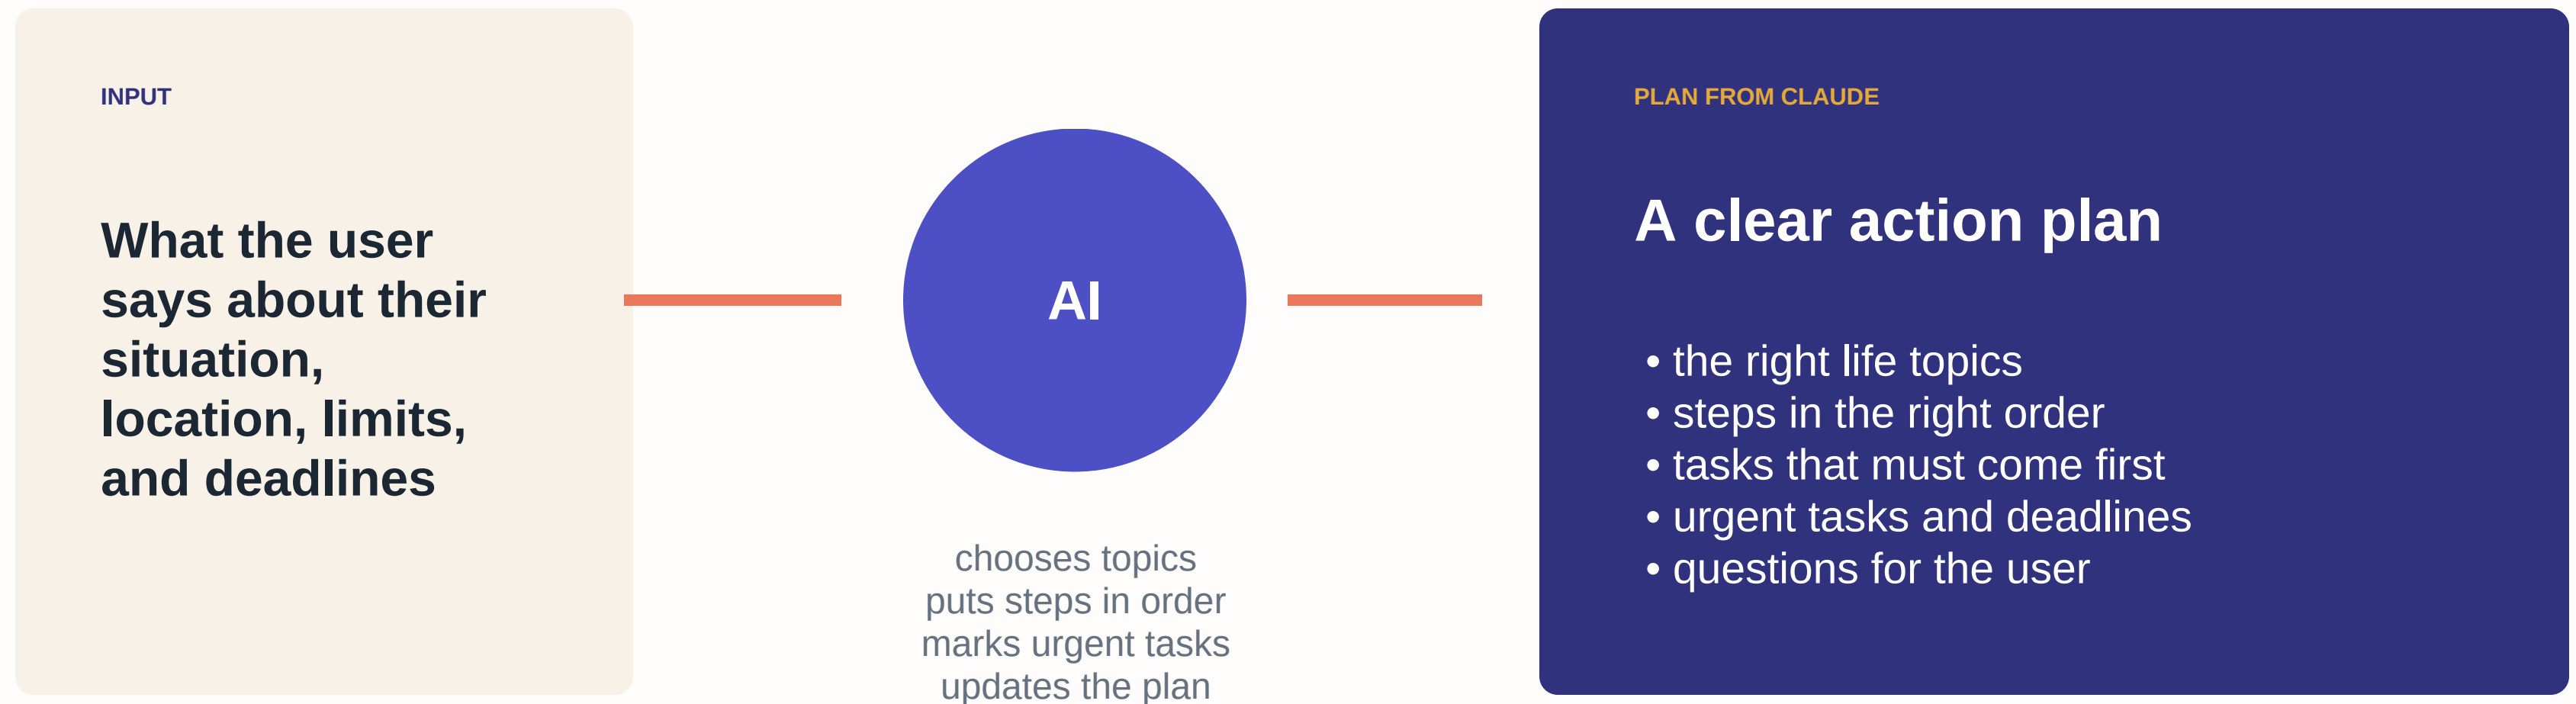

SOON

Confirm housing stability

The app puts the steps in the right order.

The role of AI

AI reads the situation, chooses the right topics, and updates the plan

A normal form cannot understand every situation or update the plan when something changes.

The plan changes as the user makes progress

Finished tasks stay complete. The app updates what comes next.

BEFORE

- Get identification documents
- Apply for state ID
- Draft employment plan
- Confirm housing plan

user update

AFTER

- ✓ State ID completed
- 1 Confirm the work deadline
- 2 Prepare job-search evidence
- 3 Review the plan with an officer

Progress tracking directly changes the next plan.

Wrong advice can hurt people

Users may act on an answer before they have time to check it

RISK

The model makes up a deadline, a rule about who qualifies, or a local service.

WHAT CAN HAPPEN

The user could miss a deadline, benefits, healthcare, or a safe option.

PROTECTION

Check the AI output, ask the user to confirm important facts, and show crisis help.

The app does not make up agency names, phone numbers, websites, deadlines, eligibility rules, or legal answers. Users can turn off saving and delete their plans.

THANK YOU!
